

[Open Letter to Anna Bligh](#)

Anna Bligh MP
Premier of Queensland
PO Box 15185
City East
Queensland 4002

12 September, 2009

Dear Anna

Thank you for advising via your "climate change" department and our latest AGL electricity bill that my family are responsible for liberating 2.04 tonnes of fixed carbon into the atmosphere as CO₂ for the further beneficial use by all animals and plants on Earth.

It is good to see our government showing this subtle initiative as there is a general lack of knowledge on the importance that CO₂ plays in our lives, and you have chosen to highlight its importance.

I too am spreading the word and have compiled a lecture on the subject. See www.bosmin.com/Rotary1.pdf .

Please make this presentation available to our Minister for Education and advise that I am able to address any students seeking edification on this subject. You will agree it is very important that our school children be well informed on the vital role CO₂ plays in all our lives.

By the way, I hope you are able to maintain the Queensland ban on uranium mining. We do not want that pesky super efficient nuclear energy source messing with our carbon based export industries, do we?

It's great to be part of the Sunshine Smart State.

Best regards

Bob Beatty BE FausIMM(CP)
