

Personal and Economic Liberty at Stake

October 25th

To the Letters Editor

As the Copenhagen gab fest nears, the Global Warming/Climate Change believers and advocates are becoming shrill. British P. M. Gordon Brown made the ridiculous statement "Success at Copenhagen is still within reach. But if we falter, the earth itself will be at risk."

Lord Monckton having carefully read the proposed 200 page treaty has warned that signatories to the treaty will see their national sovereignty negated. It will be replaced by a Marxist /Soviet type regime directed from unelected dark green bureaucrats from Brussels.

The proposed ETS in reality, is a tax on the consumption of power by all, and shows that Australia's Labor and Liberal parties, are driven by green political party propaganda.

The demise of Australian industries and the jobs and living standards of the Nation's population is now at stake.
